

## **Auto upgrade for 24online Version for X.5.0.1 Includes (6.5.0.1 and 5.5.0.1)**

### **Release Notes**

#### **Enhancement / Features**

- Date in Audit Log for changes done in Console
- Mail to Admin Id configured in 24online, in case of failure in Backup (If backup is taken successfully but database file is less than 100k, we are considering it failure)
- View only ACL user can see IP Address Login restriction
- Sorting on Bandwidth in Live user page
- Serial ID registration will create user with Default Yes for Bind to Mac option

#### **Bug Solved**

- Problem in initial configuration of Console Post Installation Wizard
- Error Page while configuring cache key word pages
- Firewall rules not able to configure proxy entry
- Web surfing search page was having "Content Name" label instead of "User Name"
- Sorting problem on Live user page for show all option
- Spelling mistake in Web Based Client
- Problem in SNAT IP Release on logout of the client
